

# PHP POS Print (Local Server)

A **php** application for printing POS receipts

## Installation

- Copy the **pos\_print\_server** directory into your local Server document root.
- Start server from command line with the below command  
`php server.php`
- This app runs at **port 6441 ( ws://localhost:6441 )** and listen for the print jobs.
- You can simply add `server.sh` file to start the server, so that you will not need to start server manually everytime.
- You will need to install this script in all computers where you want to print POS receipt.
